

1 Introduction

We respect your privacy and we process your personal data only with the purpose for which you have shared your data. In this privacy statement, we aim to make it clear what personal data we collect and store and for what purpose.

2 Definitions

SNiC 2023: CreativIT: The conference organized by Stichting Nationaal Informatica Congres on November 19th 2023 and the organizational committee behind it. Hereafter also named “CreativIT”.

CreativIT committee: the organization behind CreativIT. Can also be referred to as “the CreativIT organization”.

Participant: Visitor of CreativIT, who is in possession of a valid ticket provided by their study association.

Partner: company or other organization (financially) contributing to CreativIT and optionally also present at CreativIT.

3 Processes where personal data is processed

To organize CreativIT, certain processes take place where personal data is involved. These processes are listed below. Unless otherwise noted, processing happens on the ground of legitimate interest.

3.1 Registration for CreativIT

When registering for CreativIT, either as a participant or as someone else, one has to provide their personal details. This data includes at most: name, email address, study program, dietary wishes and (indirectly) study association. Those details will be stored in the CreativIT website database. These details will be used to identify users during the conference.

3.2 Registration for tracks

To register for the tracks, participants need to use their personal account on the CreativIT website. The website will register who registered for which tracks. This information is only visible to the corresponding participant and the committee.

3.3 Scanning of QR codes

During the conference, partners can scan the QR codes of participants, which can be found on their personal page on the CreativIT website and on their personal keycards. When a partner scans a participant's QR code, this participant will be added to the partner's list of connections. After the conference, the partner will receive this list. See also section 4.3 of this privacy statement.

3.4 Resume for speeddates

As preparation for the speeddates, participants can send their resume beforehand to CreativIT. CreativIT will then share these resumes with the partners present at the speeddates. The committee will request these partners to destroy the shared resumes once CreativIT has taken place.

3.5 Photos and video recordings

During CreativIT, photos and video recordings will be made of the conference. All people present at CreativIT agree to being on these photos or videos. After CreativIT has taken place, these photos and videos will be shared on the social media channels of SNiC. These photos and videos may also be used by future SNiC conferences for promotional reasons.

4 Processing by third parties

For CreativIT, processing of personal data is also done by third parties. These parties are listed below.

4.1 Webhosting

The CreativIT website is hosted on the Digital Ocean servers. For this, we refer you to the [privacy policy of Digital ocean](#).

4.2 Caterer

To adhere to the dietary wishes of all people present at CreativIT, the dietary wishes of everyone are collected. The caterer will receive a list of different dietary wishes and how many people have these wishes. This personal information is therefore shared anonymously.

4.3 Partners

After CreativIT has taken place, all partners will receive a list of all participants they connected with during the conference. This list includes for each participant their name, email address and study program. As mentioned in section 3.4, resumes for the speeddates are also shared with companies. They are requested to destroy these after the speeddates have taken place.

4.4 Study associations

During the period between sharing ticket codes and the CreativIT conference on November 29th, the CreativIT committee will share the list of registered participants with their corresponding study associations. This gives each study association a list of who still has to activate their CreativIT ticket.

5. Privacy rights

If a data subject wishes to see what data is being stored about them, they can send an email to the CreativIT organization who will then show them the data using the contact details on the CreativIT website. CreativIT will not unnecessarily store this personal data after the conference has taken place. Therefore, all personal data will be deleted at most three months after the CreativIT committee has been discharged, but at least before July 1st 2024.
